Force 10

by Neil J Ross
University of St Andrews

Force 10 is a projective rendering of the graph of the first cycle from zero in both x and y of a scaling factor times

$$3+2\cos(x)+2\cos(y)+6\cos(2x)+6\cos(2y)$$
$$-4\cos(x)\cos(y)+4\cos(2x)\cos(y)$$
$$+4\cos(x)\cos(2y)+12\cos(2x)\cos(2y).$$

A 50x50 data grid was used. The view is from between two peripheral peaks looking towards the point $(\pi,\pi,0)$.
