

Math Apps, Applications, and Examples

New MathApps

 Doomsday Algorithm	 Reuleaux Tetrahedron	 RSA Encryption	 Sieve of Eratosthenes
 Tessellations	 The Book of Lemmas Proposition 1	 The Book of Lemmas Proposition 9	 The Book of Lemmas Proposition 11
 The Book of Lemmas Proposition 15	 Visualizing the Area of a Circle Using Rectangles	 Visualizing the Area of a Circle Using Sectors	 See more Math Apps...

New Applications

 Analysis of a Vapor-Compression Refrigeration Cycle	 Bivariate Polynomial Regression	 Conditioning Air into the Human Comfort Zone	 Energy Needed to Vaporize Ethanol
 Flow Through an Expansion Valve	 Heat Transfer Coefficient of Air Flowing Across a Flat Plate	 Mixing Humid Air	 Optimizing the Efficiency of a Regenerative Rankine Cycle
 Particle Falling Through Air	<p>Parameters</p> <p>Fluid: <input type="text" value="Isobutane"/></p> <p>Minimum Pressure: <input type="text" value="0.0"/> Pa</p> <p>Maximum Pressure: <input type="text" value="4059100.0"/> Pa</p> <p>Saturation Temperature of Fluids</p>		

New Examples

- [DataFrame/Guide](#): A guide to working with data frames.
- [examples/DataFrame/Statistics](#): Examples of using commands from Statistics on data frames.
- [examples/DataFrame/Subsets](#): Examples of finding subsets for data frames.
- [examples/EmbeddedComponents/ExploreApp](#): Building an interactive application using Explore.
- [examples/EmbeddedComponents/NumberLine](#): Building an interactive number line.
- [examples/GaussInt](#): Examples on working with Gaussian Integers.
- [examples/IrisData](#): Examples of using summary statistics and principal component analysis on the Iris dataset.
- [examples/moreStudentMultivariateCalculus](#): Additional examples using the Student Multivariate Calculus package.
- [examples/NumberTheory/ArithmeticFunctions](#): Selected examples on arithmetic functions.
- [examples/NumberTheory/Divisibility](#): Selected examples on divisibility.
- [examples/NumberTheory/MersennePrimes](#): Overview of commands relating to Mersenne primes.
- [examples/NumberTheory/PrimeNumbers](#): Overview of working with prime numbers.
- [examples/NumericDDEs](#): Examples of numeric differential equations with delay.
- [examples/ProgrammaticContentGeneration](#): Examples for programmatically generating worksheet content.
- [examples/RootOf](#): Using the **RootOf** function.
- [examples/StudentLinearAlgebra](#): Examples illustrating the Student Linear Algebra package.

New How Do I? pages and More

- [How Do I Plot a Straight Line?](#)
- [How Do I Plot Multiple Functions?](#)
- [How Do I Select a Math Style?](#)
- [How Do I Solve an Ordinary Differential Equation?](#)
- [How Do I Work with Random Generators?](#)
- [Maple Quick Start](#)
